DIALYSIS WATER REVERSE OSMOSIS SERIES (DWRO)

Advanced Equipment and Services had delivered two main Dialysis series to cover all needs for this high standards of water quality. The Stationary Dialysis RO for multipatient dialysis centers, and the Mobile Dialysis RO that can treat patients with a limited mobility situation such as ER operations or ICU treatments.

Techno support

Commissioning, Start-up, operator training, retrofits and modernization are available.

Zero downtime

We supply all the basic two year critical spare parts with our units. Also we also use very well-know and proven components in all of our systems.

Turnkey solutions

We can provide the basic RO systems plus all pretreatment and posttreatment such us:

- Chemical injection systems
- Multimedia systems
- Calcite contact tanks
- Ozone generators
- UV disinfection
- H2S removal

**Remote monitoring
included in all our
systems!**

For more information on any of our products or services please visit us on the Web at:

UP TO 0.4 GPM OF PERMEATE

FROM 2.8 GPM OF PERMEATE

KEY FEATURES

- Monitoring screen helps to assure water product meets the require standard before and during dialysis operation
- Emergency protection, in case of high salinity feed water or low-pressure system will react accordingly and provide message to operator
- Automatic rinse cycles, helping to preserve water quality under control
- Easy interphase with operator facilitates system operation
- Water pretreatment included. It consists of sediment and activated carbon filters to remove suspended solids and residual chlorine from incoming feed water
- Feed and permeate Water Conductivity are display for customer peace of mind making sure water meets quality standard
- Pressure switch protects system in case of unexpected shutoff feed water supply
