

## REMOTE CONTROL AND MONITORING OPTION:

Advanced Equipment and Services Inc. offers standard remote control and monitoring access for all our systems, service is offered through a web connection wired or wireless. This feature allows customer to:

- Online Monitoring
- Alerts via emails
- Data logging capabilities at extra cost
- Tracks and reports system operations in real time,
- Alerting operators of issues and giving them access to the water treatment performance data they require
- Provides the capability to monitor remotely located equipment and machinery utilizing internet connection, which allows for ultimate reliability and performance. The Online package offers complete transparency of your system operations and performance so you can trust the system to do its job, knowing that it will inform you with an alert when necessary.
- Also, enables our experts to connect to your system and remotely assist in optimizing performance and providing support.
- Remote Control
- Systems are built to operate automatically, smoothly and reliably for many years, taking care of themselves,
- HMI mirroring package with full control from any mobile device. With Remote Control, your system is only a few clicks away, wherever you are.
- Remote trouble shooting
- Change parameters and settings based on customer seasonal needs

Customer supplied laptop or PC will be loaded with the appropriate software to mirror the HMI screen installed in the machine. Example:

Global provider of Reverse Osmosis & Water Treatment Systems
